

1. List the question the study is designed to answer and the main variables involved. Outline a study you could do to answer this question. Who would you test and under what conditions, what data would you collect, and how would you analyze it?

2. What type of research design was used in the study shown in the video? What are the advantages and disadvantages of doing the study that way?

3. Analyze the data from the study. What are your results and conclusions?

4. Compare your results and conclusions to those of the researchers. How do you account for any differences?
